First ideas for work:

to take or find one of the Tevatan "bells" (I think they use oxygen gas bottles) and then copy it in cymbal bronze 2 times and send one off to the island.

it's not gas, but oxygen bottles they use, Joe tells me. It's normally used for welding

to make this with Kemner?

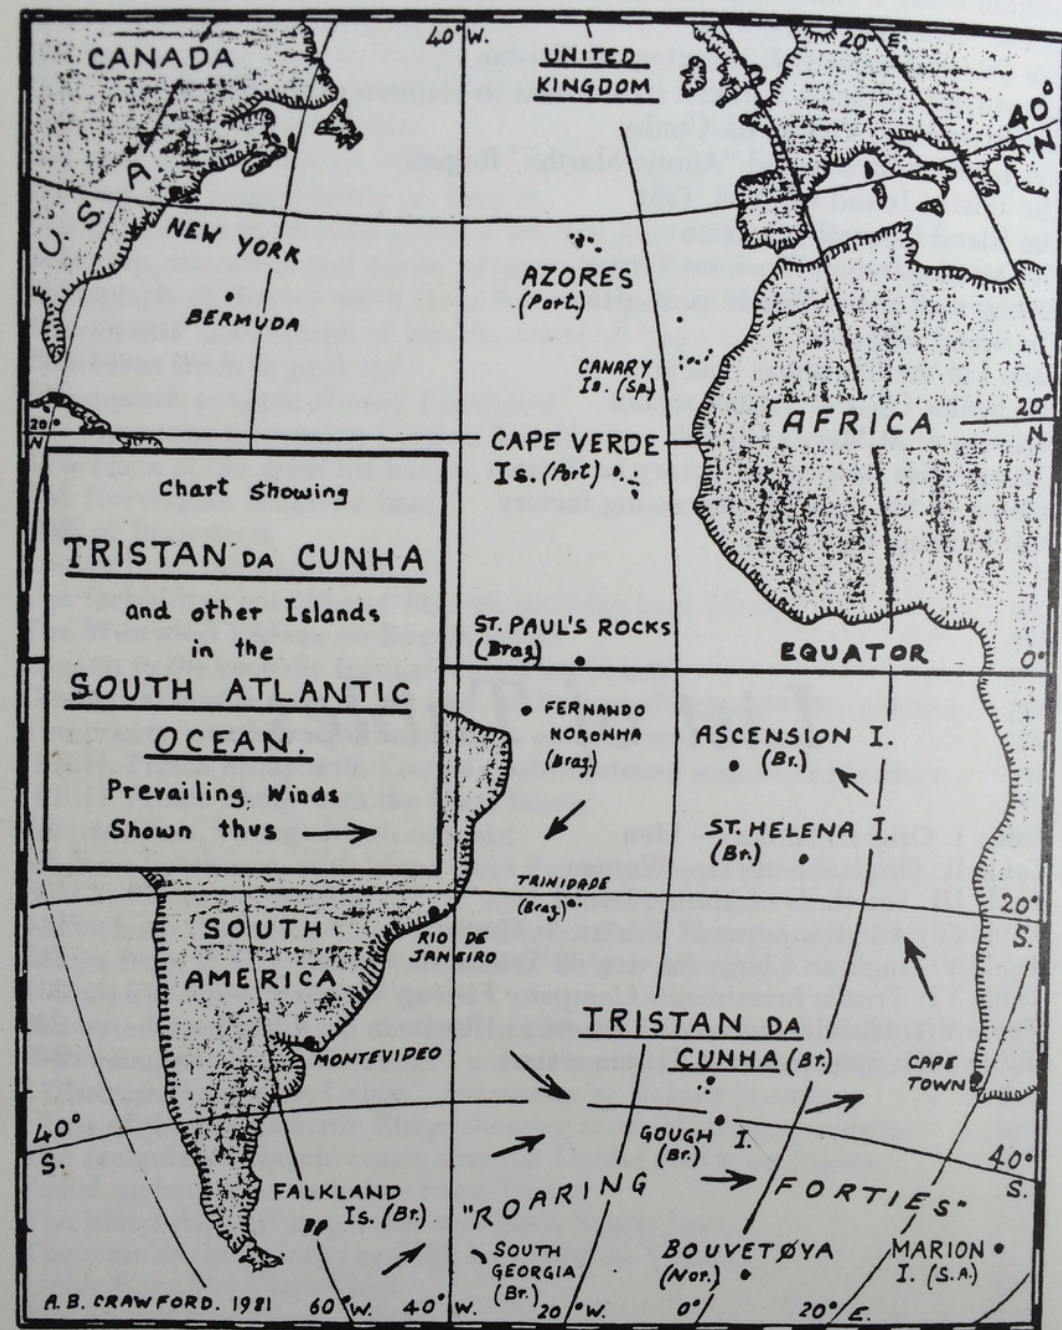

but won't it be much too loud?

(with what do they hit it?)

note to self: make a good photo ^{me} of the bells and note down what size/type they use as it must be some thing that can be bought from cage down. (but can I buy an empty one?) ✓

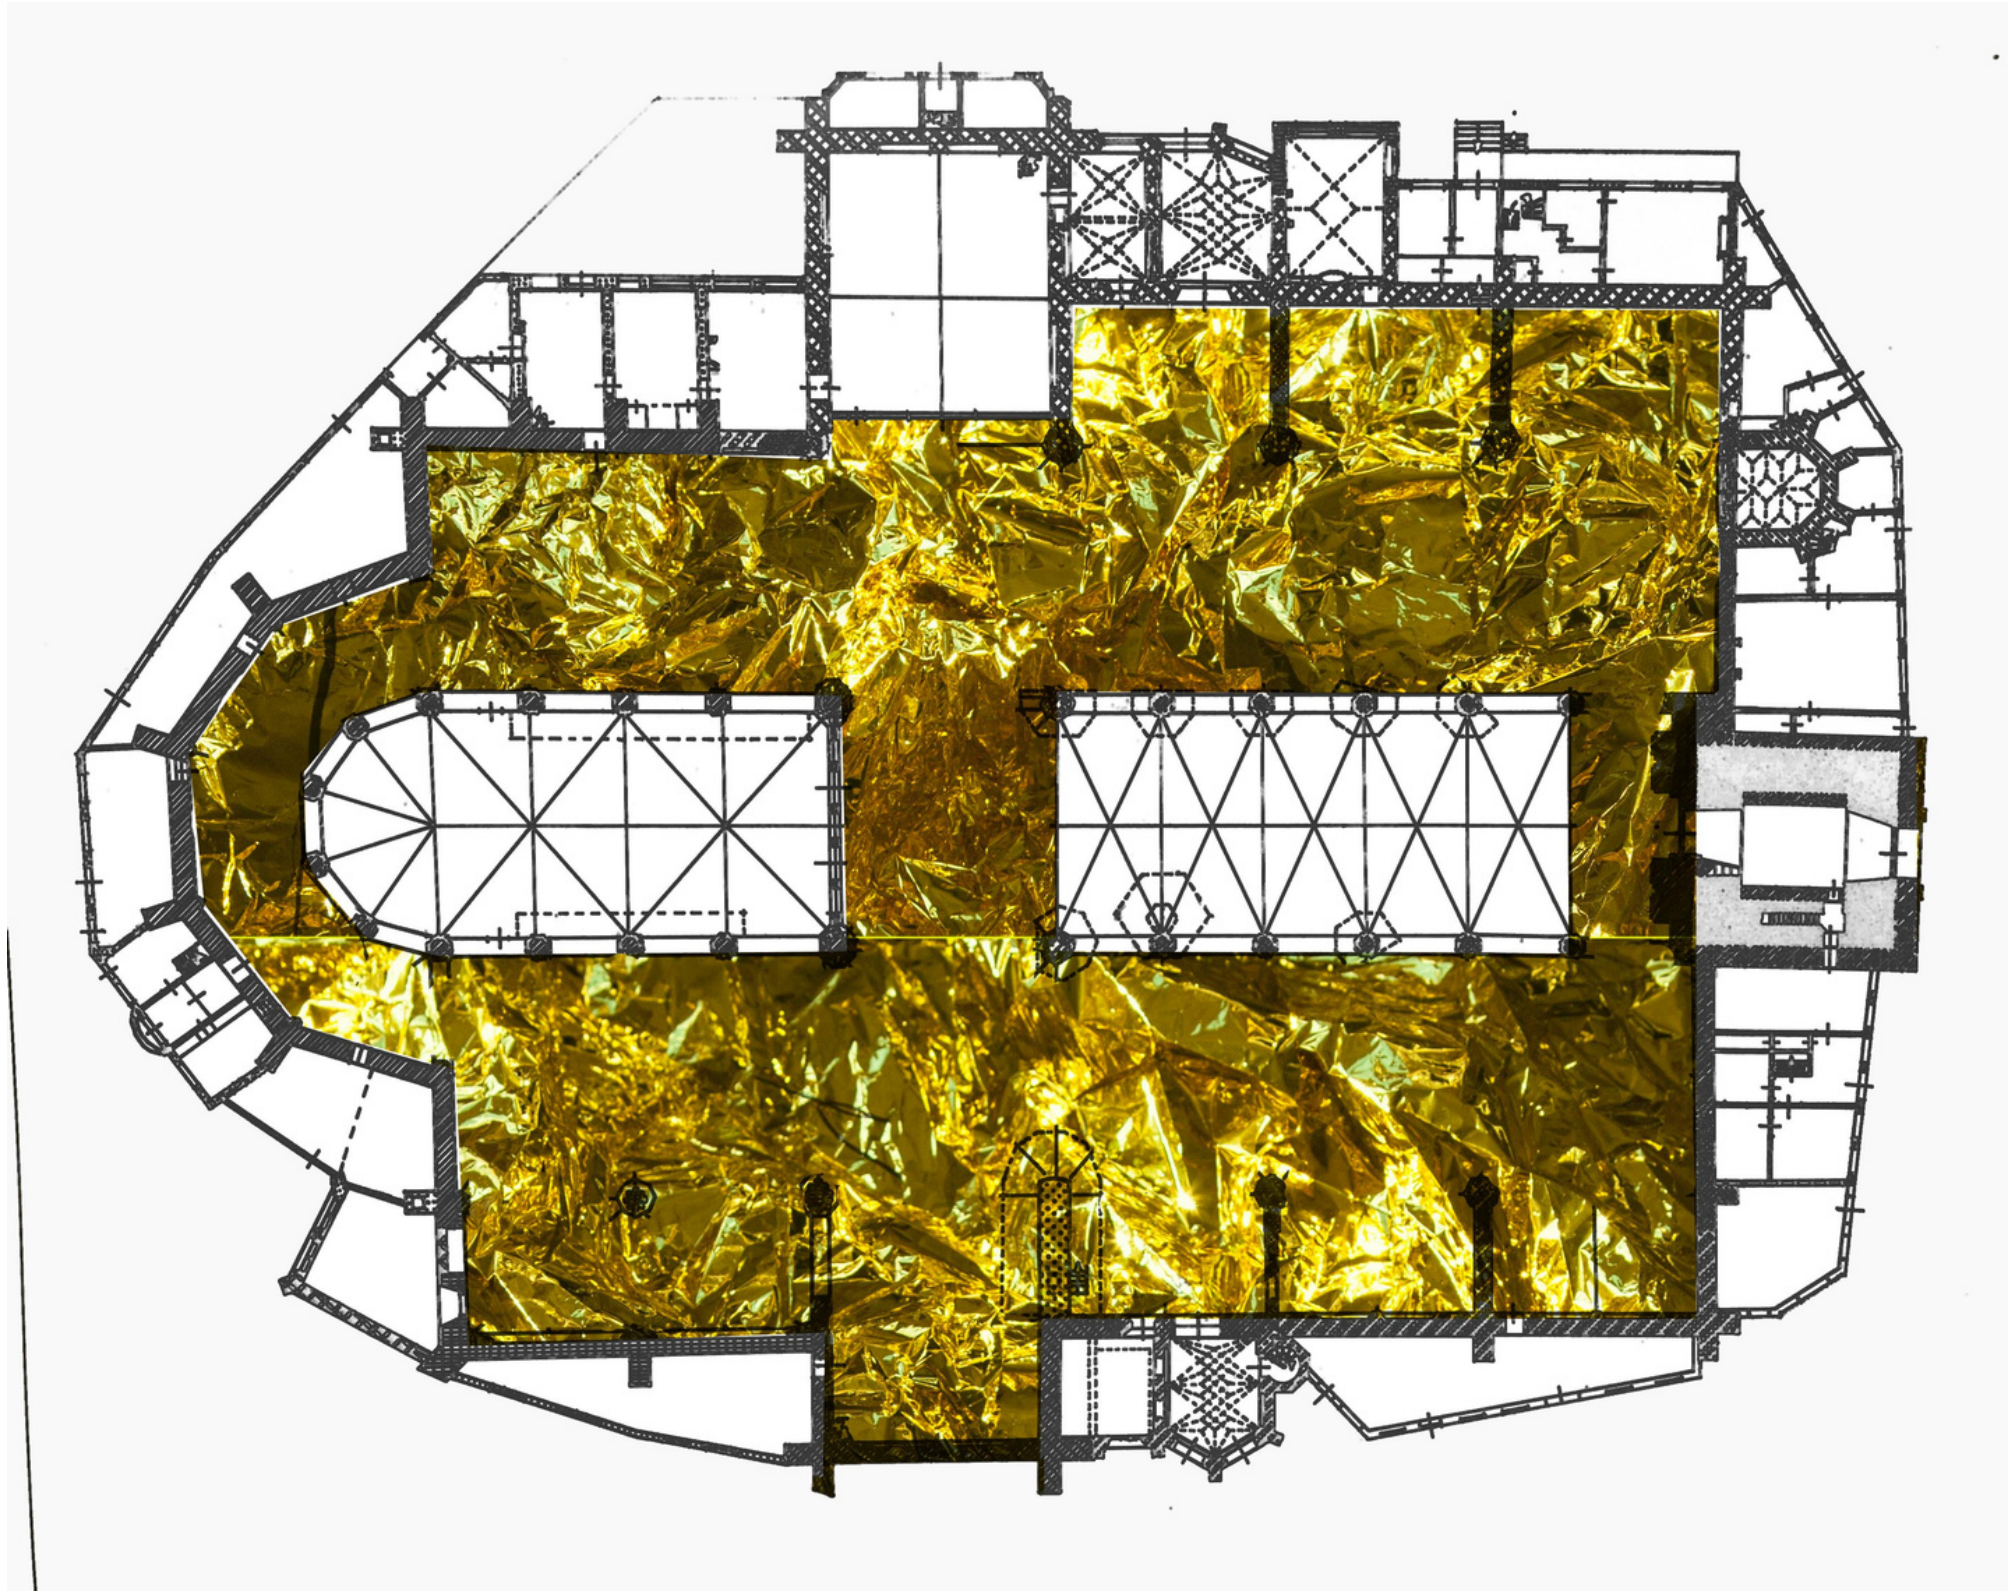

The Atlantic Ocean showing the position of Tristan da Cunha in relation to other islands in the waters between the old and new worlds

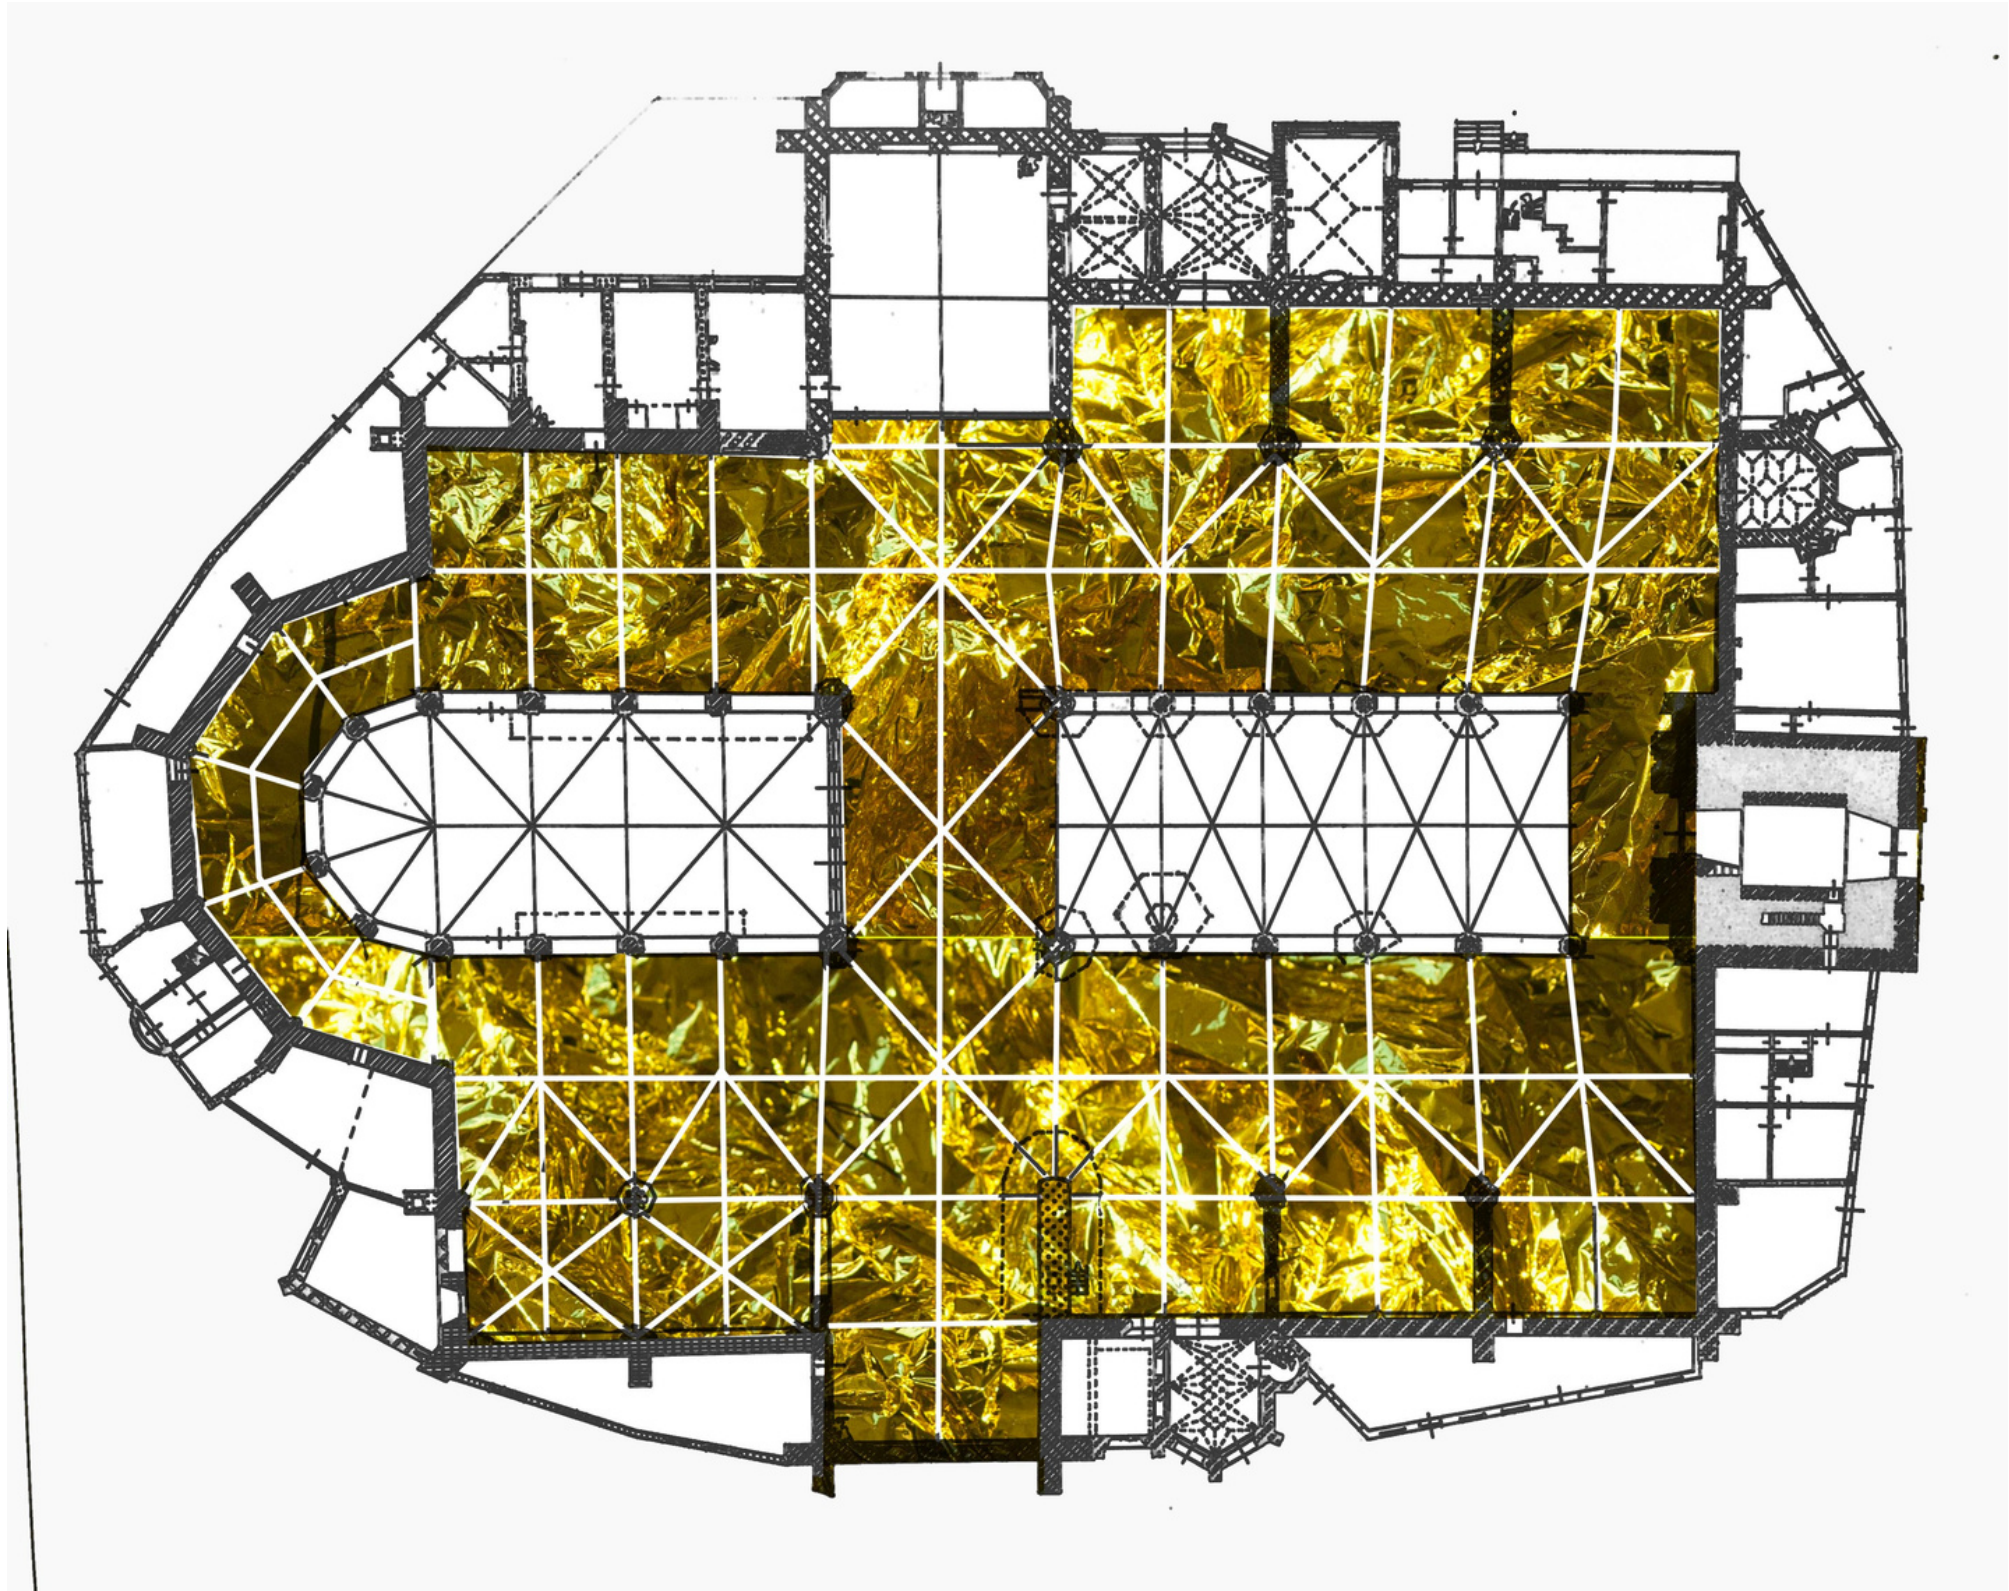

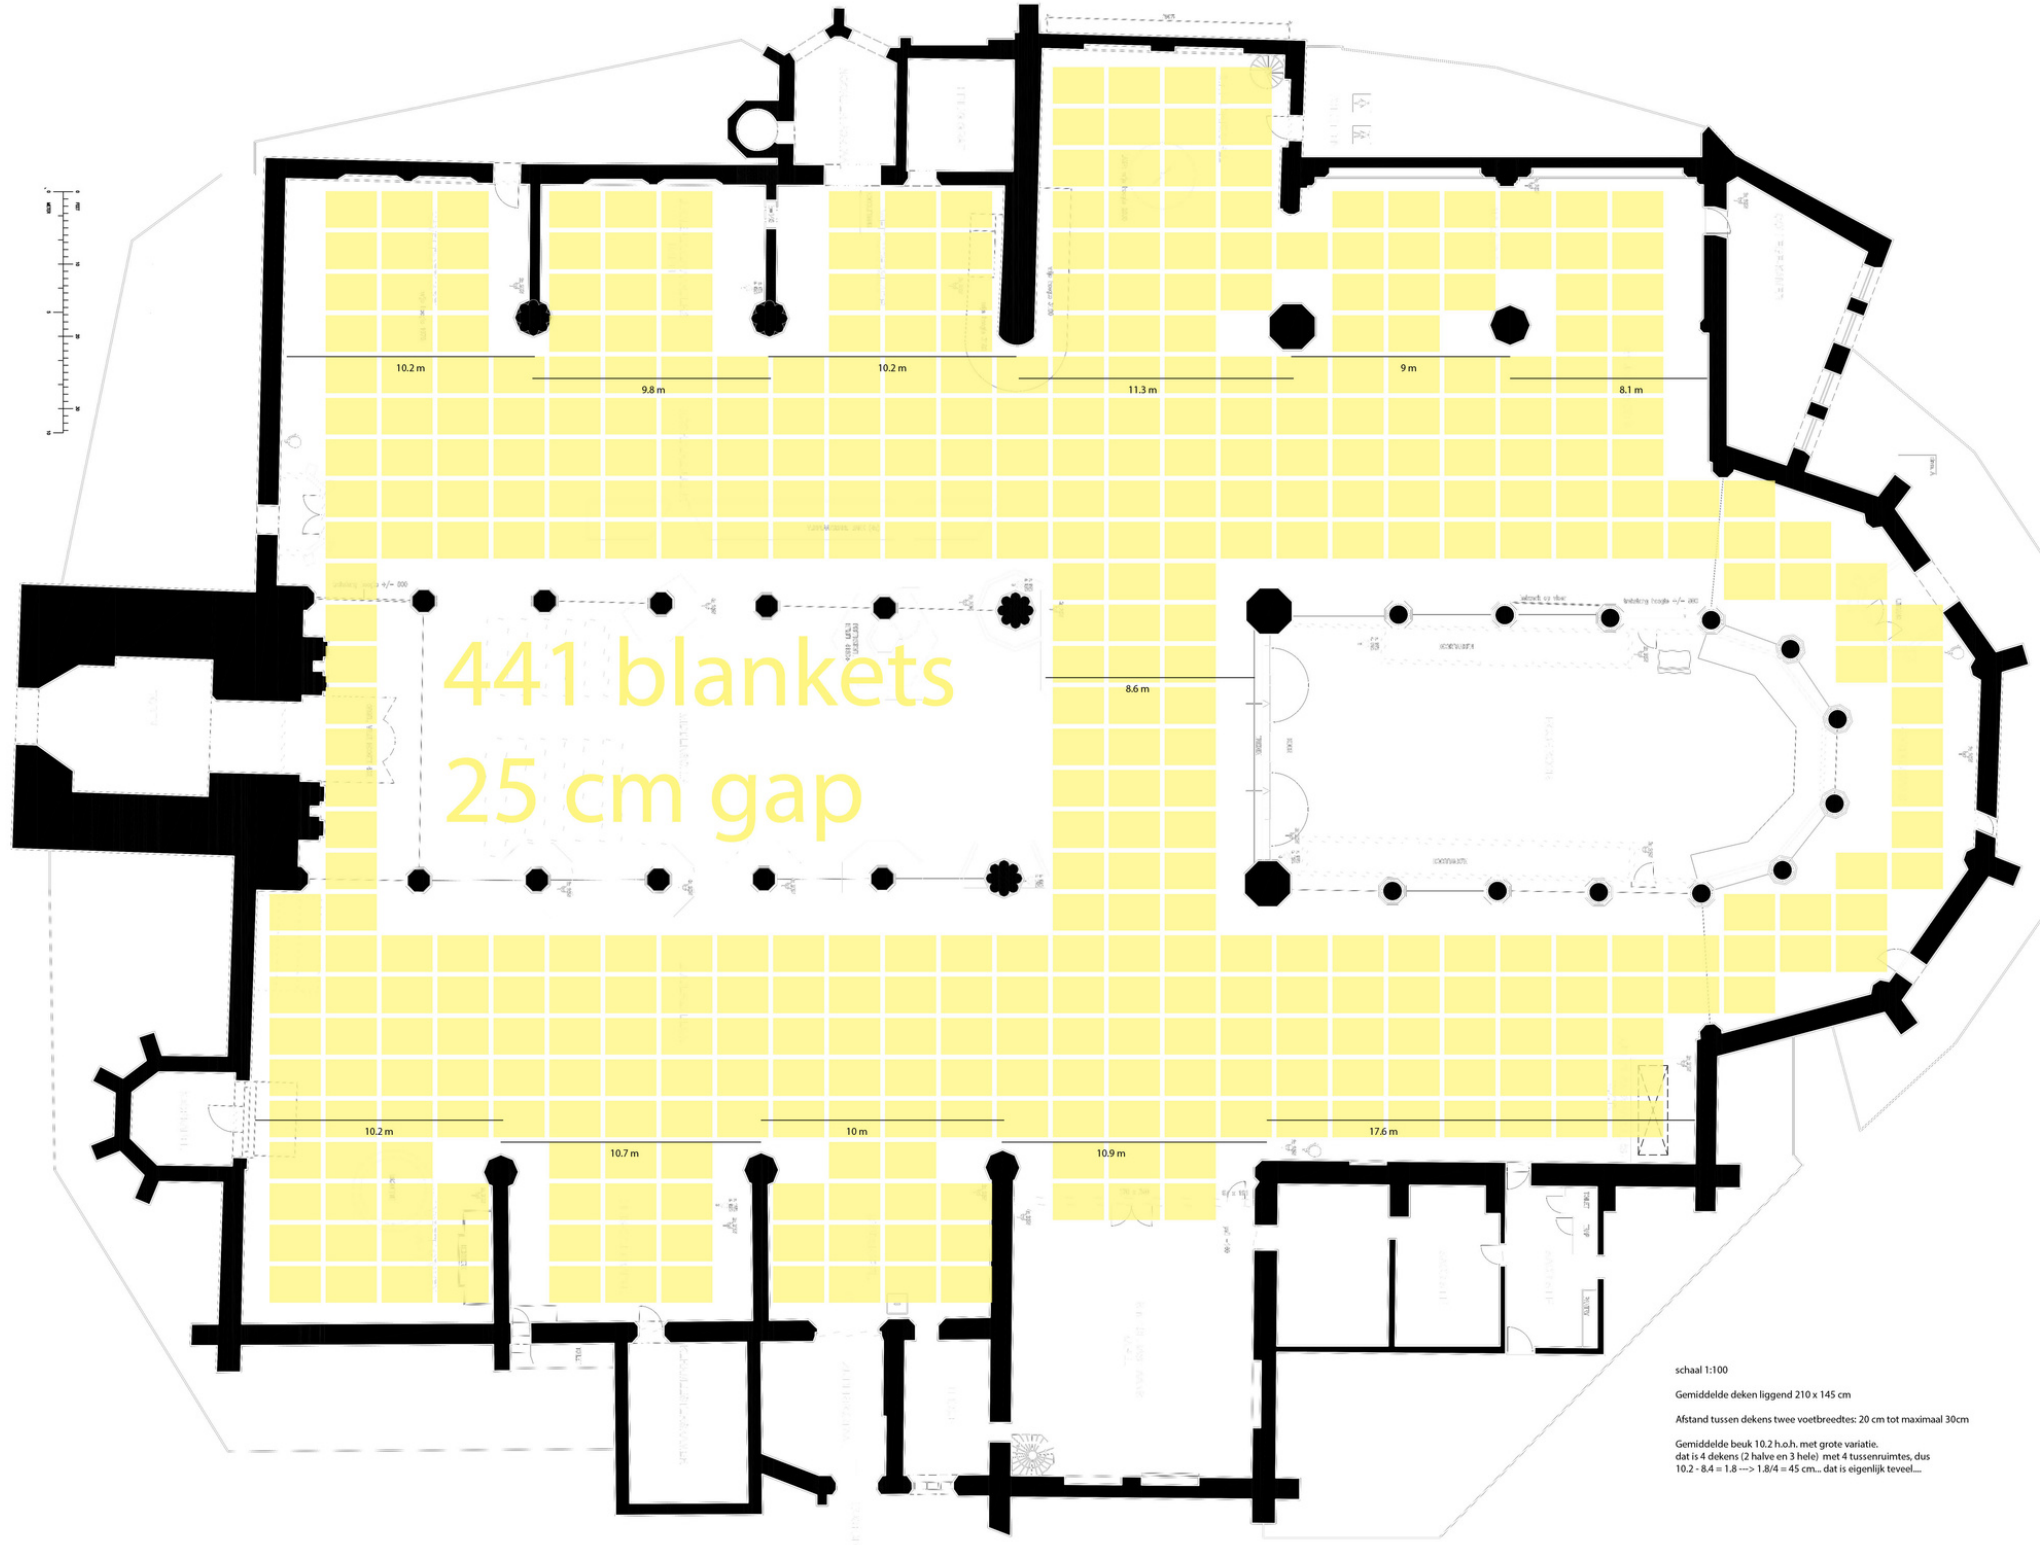

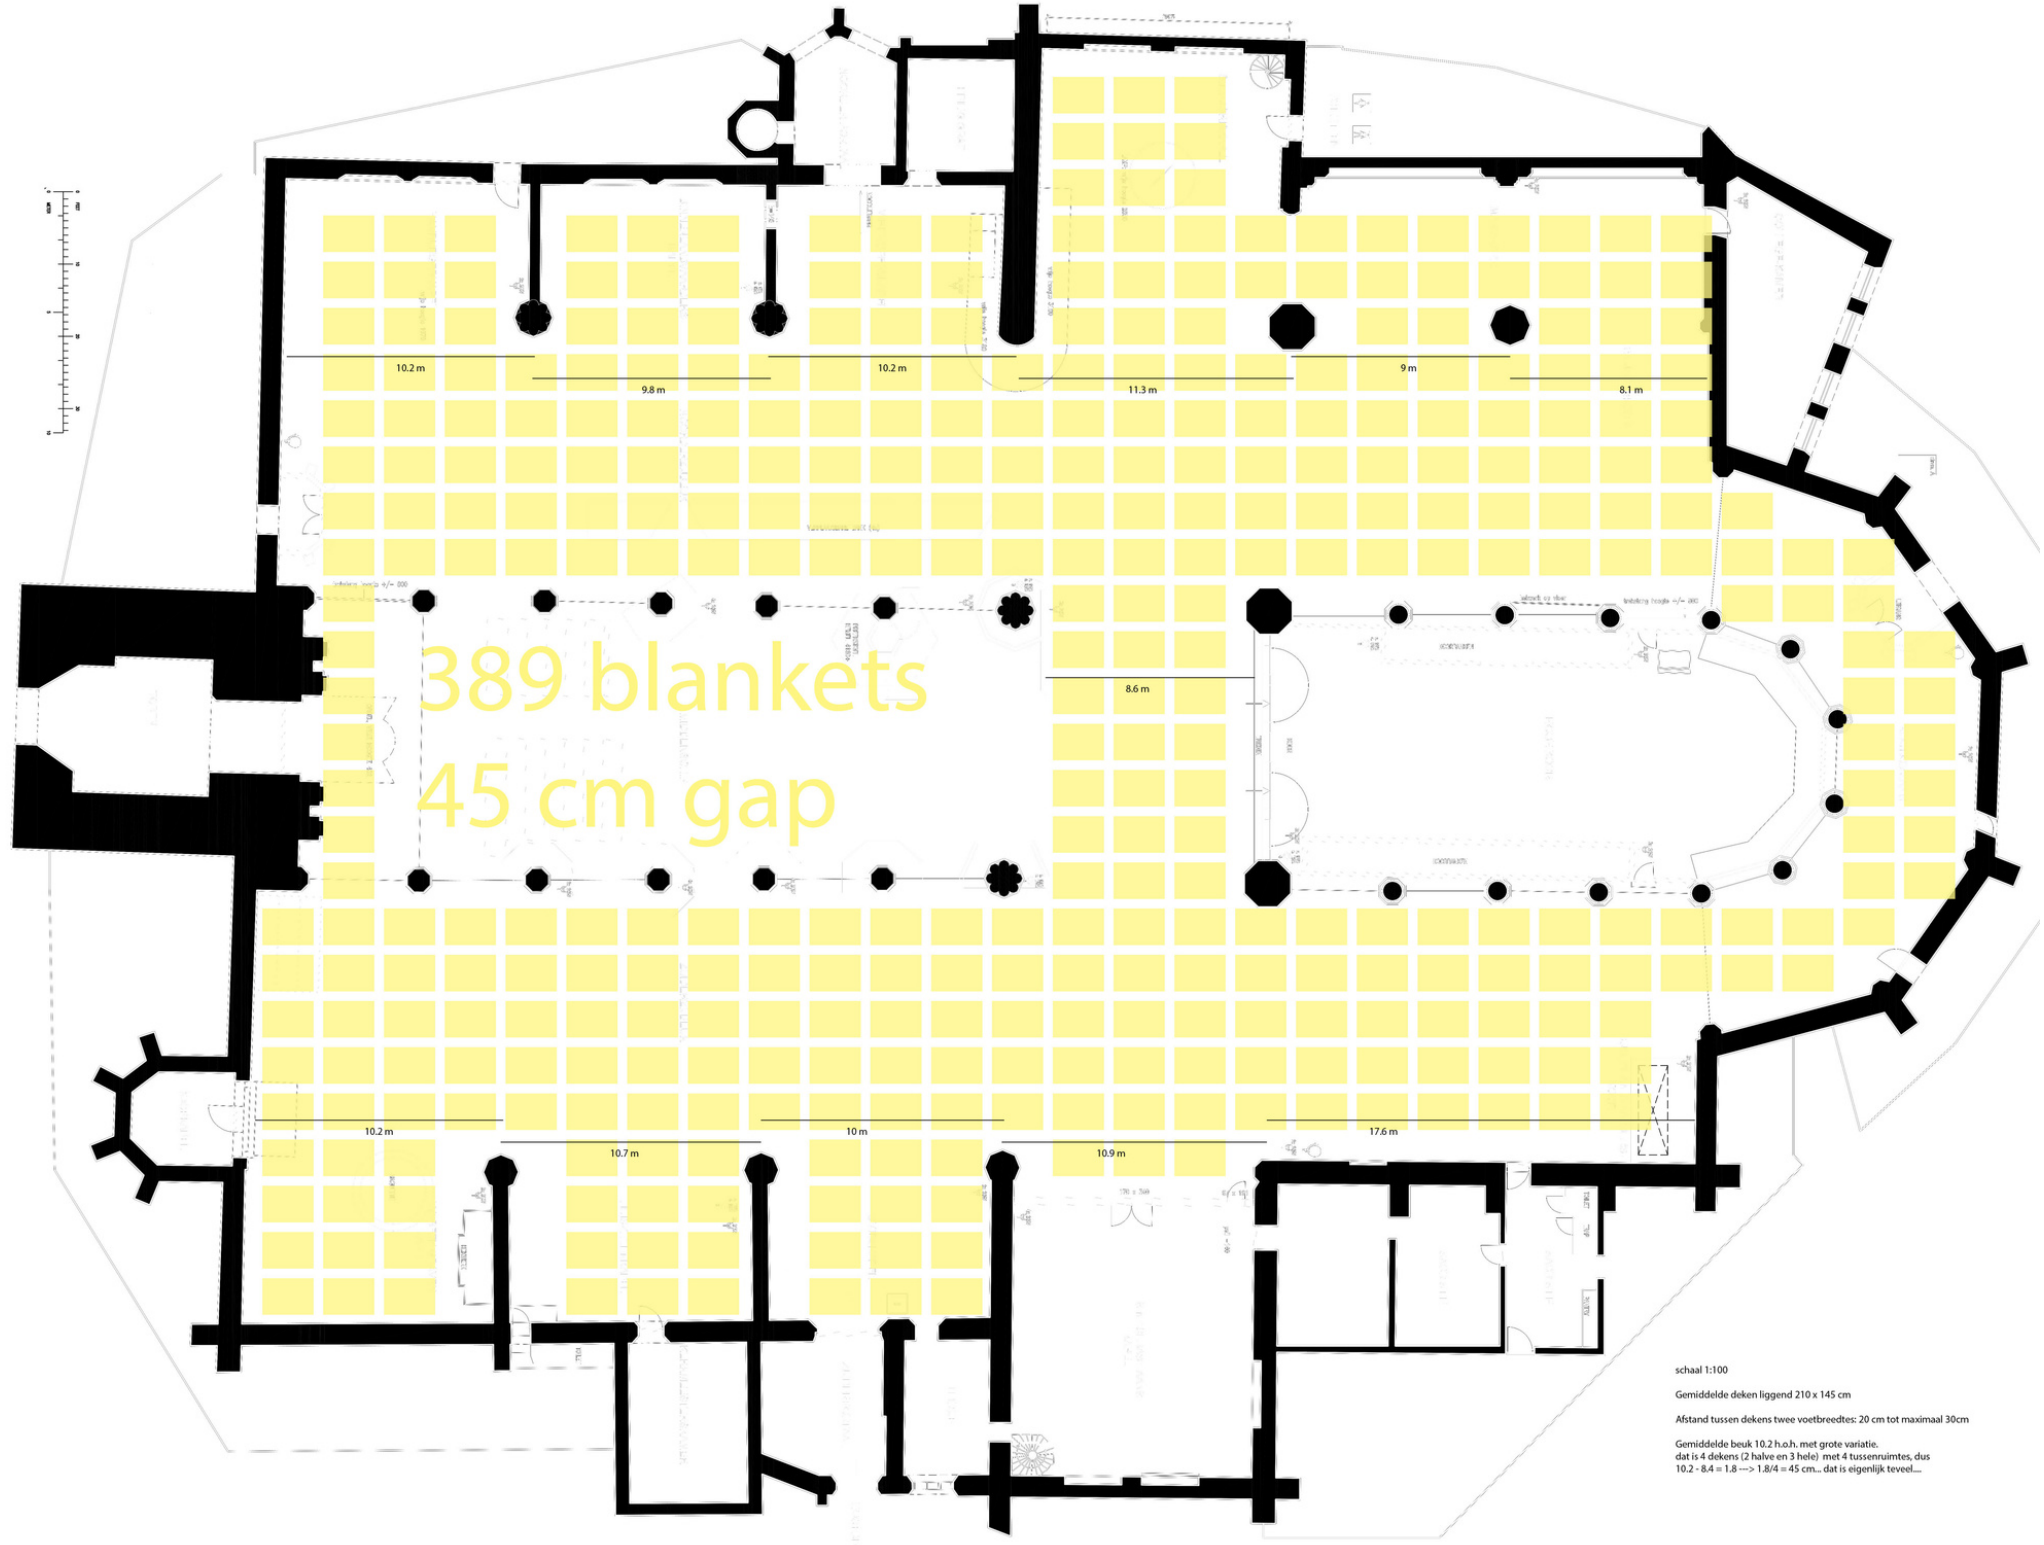

schaal 1:100
 Gemiddelde deken liggend 210 x 145 cm
 Afstand tussen dekens twee voetbreedtes: 20 cm tot maximaal 30cm
 Gemiddelde boek 10.2 h.o.h. met grote variatie.
 dat is 4 dekens (2 halve en 3 hele) met 4 tussenruimtes, dus
 $10.2 - 8.4 = 1.8 \rightarrow 1.8/4 = 45 \text{ cm}$... dat is eigenlijk teveel...
